Claim Rejections – 35 U.S.C. 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding Claim 1, line 6, "a capacitor" is vague to the claimed invention whether it refers to the capacitor shown in line 4 or another capacitor.

Claim 2 is vague by virtue of its dependency on claim 1.

Claim Rejections – 35 U.S.C. 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Dokoupil (2002/0075677) since the publication date is June 20th, 2002, which is more than a year prior to the date (December 9th, 2003) of the instant application for patent in the United States.

Regarding Claim 1, Dokoupil discloses a light emitting diode (LED) driving circuit (See Figure 7) comprising a power supply (current generated from pins 1, 10 and rectifier 16), a rectification circuit (16), an LED array (7) and a current control circuit (5, 18) and being characterized that, when the power supply passes through the current

control circuit (5, 18), using charging and discharging of a capacitor (5) and parallel equivalent resistance current-limiting characteristics of a capacitor (5) and a resistor (18), the rectification circuit (16) converts an alternating current into a direct current that is outputted to the LED array (7), thereby providing the LED array with a stable quota driving current.

Regarding Claim 2, Dokoupil discloses that the power supply comprises an alternating current (current from pins 1, 10) and a direct current (the current being rectified by rectifier 16).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wesson (6,786,625) discloses a LED light module comprising an array of LEDs. Sloan et al. (6,776,504) discloses a lighting apparatus comprising a AC means, a rectifier, a capacitor connected in parallel with an array of LEDs for current limiting. Allen (6,461,019) discloses a LED string comprising a rectifier, a AC means, and a string of LEDs. Yu (6,343,871) discloses an adjustable bulb comprising a capacitor connected in series with a rectifier and another capacitor connected in parallel with the LEDs. Madadi et al. (5,688,042) discloses a LED lamp current limiting capacitor connected between a AC source and a rectifier means. Deese et al. (5,663,719) discloses a LED light comprising a plurality of LED strings and a rectifier. Gleason et al. (5,446,440) discloses an emergency sign and control circuit comprising an array of LEDs, a rectifier and a voltage regulator.
